ZiFix™ MOTION CONTROL SYSTEM

The ZiFix™ Abdominal/Thoracic Motion Control System is designed to reliably index and maintain pressure to suppress tumour and organ motion for imaging and radiotherapy treatments. The system provides flexible positioning for a variety of clinical needs, including SBRT.

The ZiFix™ Abdominal/Thoracic Motion Control System provides abdominal compression to induce shallow breathing for managing internal motion due to respiration. The system features an anatomically shaped compression paddle for patient comfort and improved patient compliance potentially leading to better patient outcomes. The ZiFix™ Abdominal/Thoracic Motion Control System is suitable for a range of treatment angles and setups.

BENEFITS:

- Compatible with CT and MRI environments up to 3T
- Suppresses motion of lungs and liver for imaging and radiotherapy
- Provides positional consistency between imaging, simulation, and treatment

Stabilises liver and reduces imaging artifacts

Fiducial markers aid in consistent patient setup relative to patient anatomy

Shutoff valve and quick disconnect pump provide secure method of sealing air inside the bladder to enable consistent pressure

Bladder is designed to be durable up to 250 mmHg, a 2x factor of safety

The system includes multiple size compression paddles, belts and buckles to accommodate a variety of patient sizes

Dedicated case for convenient handling and storage across diverse clinical environments, including MR

OIS is the distributor for Qfix in the UK & Ireland.
ZiFix is a trademark of Qfix Systems. Patent(s) Pending.
